

**DESCRIPTION:**

Industrial Hydraulic Fluid Upgrade Additive. Designed to improve operating efficiency of lubricants and equipment.

Application Ratio: 100 mls/litre.

CHARACTERISTICS:**Extreme Pressure and Anti-Wear Additives**

Liquid Intelligents 252 is fortified with E.P.(Extreme Pressure), anti-wear and anti-oxidation additives. 252's E.P. and anti-wear additives provide efficient operation under high loads and are compatible with all metals.

The addition of Liquid Intelligents 252 to Oil will increase the lubricants ability to resist squeeze-out reducing metal-to-metal contact. Liquid Intelligents 252 bonds to metal surfaces forming a chemical compound highly resistant to extreme pressure, reducing wear and downtime.

Hydraulics

Liquid Intelligents 252 stabilises hydraulic fluids by reducing lubricant shearing one of the main causes of midday fade. Ordinary lubricants tend to increase in viscosity over time as the oil oxidises reducing service life. Liquid Intelligents 252 reduces oxidation of the lubricant extending service life ensuring smooth start-ups in colder climates.

Metal Protection

Liquid Intelligents 252's friction modifiers bond a protective film between the metal surfaces reducing frictional drag, shear, galling, plucking and seizing of equipment.

Versatility

Liquid Intelligents 252 is versatile and can be used in all types of lubricants increasing their service life and the service life of the equipment. Liquid Intelligents 252 is efficient in reducing maintenance and down time. Liquid Intelligents 252 can be used in manual, automatic and semi-automatic lubrication systems and will not increase lubricant viscosity applied at a ratio of 10% or less.

Application Ratio: 10% by volume
